

UPGRADING A BIOS

ABSTRACT OF THE DISCLOSURE

5 A technique includes receiving a first basic input/output system image to replace an existing second basic input/output system image stored in a firmware memory. The first basic input/output system image is modified by replacing a portion of the first basic input/output system image with a portion of the second basic input/output system image. The modified first basic input/output system image is written to the firmware memory to replace the second basic input/output system image.
